

Richard Radomski
4126 W Sharon Lane
Franklin, WI 53132

Job cost: 25,000

American Foundation Specialists Installed steel beams and straighten walls.
Resealed walls outside the foundation on south and west walls of our home.

This company truly stands behind what they say they will do! From the time Tony stepped foot in our home he was understanding about how we were feeling about the unfortunate condition of our basement walls and extremely informative about the process. We did check with other companies before going with American Foundation Specialists but decided to use them because of their reputation, reviews on Angie's List and their commitment to get it done right. The morning they started it was like an army of trucks and equipment had invaded the neighborhood. They went right to work by removing all my landscaping stone (something I never asked them to do) and placing it on a tarp on our driveway. I thought they would just excavate and the stone would be lost, but they saved about 4 yards of landscaping stone that I was able to use in my backyard. What an unexpected pleasure that was! Not only did they complete the project on time, they told us they would, they even washed my basement floor before they left. The steps were tarped going to and from the garage to create minimal wear and tear on our flooring; they took off their work shoes whenever they entered our home. They were courteous, patient when answering questions, and very hardworking. When they left, the driveway and street were hosed down and the grass raked. Tony called the day after they completed the job to check on our satisfaction with the job that his crew did. He also stopped by to check on the work himself. All in all, I would highly recommend American Foundation Specialists for any work that you need done. They are a family owned company that stands behind their work and shows they care.
