I had our basement walls repaired by American Foundation Specialists. One wall was bulged inwards 7 inches, ready to collapse. My other walls were 3 to 4" bulged inwards.

They straightened the walls back plumb on the 1st day after excavation, I was surprised.

The second day they waterproofed the exterior with cement, tar & poly plastic. They also added insulation & new draitile & started to back fill stone.

The third day they finished back filling & even installed a safety egress window the largest in the industry 32" wide & 60" tall.

Each & every day they started at approx. 7:30 am & worked till 8 & 9 pm, into the darkness. Unbelievably they started & finished this \$25,000 job in 4 long days. Each day 10 to 12 men worked on my house repair. All of the employee's & sales staff were so polite & helpful; it was a pleasure working with American Foundation. I had other estimates & after comparing the quality of repair per each contractor, it was evident American gave more per dollar than any other company.

The owner Tony told me, " If quality of a repair is needed. American will do the job." He was right, I recommend American Foundation Specialist's to anyone, their price is competitive, family owned & everything that was done was to my satisfaction. When the owner Tony stated to install an egress window in the basement & that it would add value to the house. It was like getting my basement done for free of charge. What a great idea.

Thanks for a Great Job
